

Job Overview

Candidate will join an innovative, challenging, fast-paced environment to develop and optimise composite materials for various engineering applications. We are looking for creative, enthusiastic and proactive candidates who can think outside the box and propose innovative solutions.

The candidate will work with the management team and attend exhibitions and events in Europe.

Company Overview

nlcomp is a clean-tech startup that aims to solve one of the biggest problems in the composite industry: the end-of-life of composite parts. We have designed and patented rComposite®: a recyclable and sustainable composite material that has a lower impact than traditional composites [i.e., fiberglass] thanks to the use of natural and recycled fibers. rComposite® was already successfully used for the production of **ecoracer** "the world's first recyclable sailing boat".

The company closed a half-million euro investment round in 2022 and just received an investment from an institutional investor, and plans to grow rapidly in the coming years.

Location: our new facilities in Monfalcone, FVG, Italy (with the possibility of smart working days)

Specific skills
